OBS OH MY

We're going to set the scene for ya. Picture this: An obs patient strolls in, waits for what feels like an eternity (okay, let's be real, maybe just 15 minutes), the doc swoops in for a speedy 2-minute exam, and BAM, the appointment is over. So why not shake things up and be proactive when it comes to Observation Appts!

1

Detective Mode:

What type of obs appointment is this? Is it the first appt after the initial evaluation, or are we on the next step, monitoring for a possible second phase treatment?

2

X-ray:

Check the calendar – when was the last X-ray taken? If it's been over a year, odds are your doc will want a fresh snapshot.

3

Tooth Development:

THINKING HATS ONLY! Is your patient rockin' a mixed dentition vibe? Just a few of baby teeth left, or are the grown-up chompers all present and accounted for?

4

Bite Drama:

Time for a bite-sized look . How's the patient's bite looking? Any malocclusions? Any crossbites stirring things up?

5

Treatment Goldmine:

Here's the big finale – can our patient benefit from some ortho treatment? Is it time for an early phase treatment or a full-blown comprehensive smile journey? Think ahead and explain your treatment plan with Doc!
